DuraGal® Silo Section is the new standard for grain silo construction. Its unique profile is designed to perfectly conform to the contour of grain silos and can be used in place of RHS in silo base ring sections and support legs. What sets DuraGal® Silo Section apart from painted silo sections is its “in-line” zinc coating. This means you get all the benefits that DuraGal® products are famous for, at virtually no extra cost. When combined with galvanized sheeting DuraGal® Silo Section gives you a fully galvanized Silo that requires very low maintenance compared with a painted alternative.

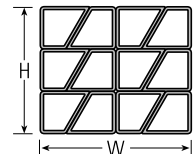

4. Lightweight, easy to handle
5. Cost savings – practically eliminates the cost incurred by shot-blasting, cleaning & painting after fabrication
6. Easy to cut, weld, drill, paint or powder coat
7. Consistent quality and dimensional tolerances

7 DuraGal® Benefits

1. Corrosive resistant, in-line, hot-dip, galvanized coating
2. Hi-tensile product - complies with both C350L0 and C450L0 requirements
3. Up to 28% more strength at no extra cost
